

The Gold Standard in Retinal Imaging

TRC-500DX:
Leading the way in retinal cameras.

In the rapidly developing technology of digital cameras, retinal imaging techniques advance quickly towards higher resolution and lower methods. New diagnostic modes and procedures require accuracy, precision and reliability more than ever before.

The Zeiss TRC-500DX, as well as the TRC-500DX (Type II), represent the unsurpassed quality of Zeiss retinal cameras, incorporating new features that enhance their reliability and operational ease. The camera can be used with a variety of photo devices, from 35mm camera backs to super high resolution digital cameras.
